

ONLINE COGNITIVE TEST SET FOR PILOTS

MODEL ACDT-P-08

Rapid, Sensitive, & Internet – based Brain Injury, Cognitive Impairment Screening Test for worldwide selection, training, monitoring, & rehabilitation of pilots

No software. No CD-ROMs. No downloads. No special or heavy equipment. No hassles. Screens & evaluates cognitive abilities prior to flight. Tests rapidly & provides automatic scores & feedback. Simply click and connect.™

Benefits

- Completely online
- Very fast, sensitive, & objective
- Self-service
- Instant scores & feedback
- Records, prints, & saves results
- Graphics & statistics of data
- Scientifically proven
- Multimedia & interactive
- User friendly
- Many foreign languages
- Featured in journals & in the News
- Easily exports data
- Touch screen Sytotechnology™ option
- Standardized & paperless tests
- Useful for all ages & cultures
- Consists of two cognitive tests recommended by the American Medical Association for older driver assessment
- Ideal assistive technology
- Optimized for repeated administration
- Compliant with 21 CFR Part 11, HIPPA, ICH GCP, & ISO 9001:2000
- Engages people who are unable to draw or write

Online Testing

Each year, millions of clock drawing tests are administered around the world. This set includes the first and only *fully web-based* Clock Drawing Test, one of the most widely used cognitive assessment tests in the entire world, and the Trails B Test, a test pioneered by the US Army. This powerful set is designed to save airlines significant time, labor, and expense to rapidly screen and monitor pilots for cognitive decline or impairment. All tests are administered online through networked computers and laptops. Instant scores, reports, statistics, and feedback are provided through this unique web-based application that enables simultaneous review and comparison of data across the world, between airlines and physicians, in real time.

This battery effectively reduces wait time and costs associated with the use of other cognitive tests. Our cognitive test battery offers great potential for fitness-to-fly evaluations to reduce injuries, aid medical decisions, and optimize the performance. These tools, and especially our Automatic Clock Drawing Test™, ensure that pilots of all ages, cultures, and educational backgrounds will be screened, monitored, and treated fairly and equally.

Start screening and monitoring the cognition of pilots online now using the ACDT-P-08.

Screens cognitive dysfunction • memory • numerical knowledge • visual perception • visual processing • visual attention • selective and divided attention • time conceptualization • visuospatial skills • executive skills
